

Forklift safety driving course

Target audience

This training is aimed towards forklift drivers.

Goal

After attending this training, the participant will be able to perform the maneuvers required for the safe operation of a forklift according to national and provincial regulatory requirements.

Duration

Theoretical part: 4 hours

Practical part: the duration of the practical assessment varies according to the specific needs of each participant. Average duration of the practical assessment by participant: 30 minutes.

Training content

This audio-visual supported training will allow participants to acquire the knowledge required by the Regulations on health and safety at work concerning the safe operation of forklift. We are a training organization accredited by the Commission des partenaires du marché du travail. Our training is eligible under the Act to promote workforce skills development and recognition.

Here are the topics that will be covered:

- Regulations basic requirements
- Description and proper use of the equipment
- Center of gravity and stability
- Lift capacities
- Safety equipment
- The types of power, storage and handling
- Inspection
- Operations, maneuvers and safety rules
- Stacking, loading and proper handling

The practical training will be carried out under the supervision of a qualified instructor and will focus on activities related the use of a forklift. Here are the main evaluation criteria:

- Inspection
- The start and stop
- Travel
- Handling of loads

Forklift safety driving course

During the training, the participants are encouraged to ask questions. Following the theoretical training, the participant must fill out a questionnaire to assess the knowledge acquired. The questionnaire and a practical evaluation report will be presented to the employer, as well as a wall certificate and wallet-sized certificate.
